

If you're an avid electric skateboard enthusiast or just starting out, one of the most important things to master is controlling your board with a remote. The electric skateboard remote serves as the ultimate tool for accelerating, braking, and navigating through traffic. But how do you make sure you're using it correctly? In this blog post, we'll be sharing some essential tips and tricks on mastering the art of riding with an electric skateboard remote. Whether you're looking to improve your technique or simply get started on the right foot, our guide will provide everything you need to know to ride like a pro!

How to Use an Electric Skateboard Remote

Assuming you have already purchased and assembled your electric skateboard, it's time to learn how to use the remote. If you're new to electric skateboarding, the remote may seem a bit daunting. But don't worry – we'll help you master the art of riding with an electric skateboard remote in no time!

Here are some tips and tricks for using an electric skateboard remote:

1. To start off, make sure your board is turned on. The red light on the back of the board should be lit up.
2. Next, hold down the power button on the remote until it lights up.
3. Now, firmly press down on the brake lever to engage the motor. You should feel a slight vibration coming from the motor when it's engaged.
4. To accelerate, simply slide your finger forward on the throttle lever. The further you slide your finger, the faster you will go!
5. To stop, release pressure on the throttle lever and press down on the brake lever again. Alternatively, you can also just let go of the throttle lever and coast to a stop.
6. When you're ready to turn, lightly press either the left or right turn signal button on the remote (depending on which way you want to turn). The board will automatically begin to slow down and turn in that direction.
7. And that's all there is to it! Just keep practicing and before long

Tips & Tricks for Riding with an Electric Skateboard Remote

If you're new to electric skateboarding, or just looking to up your game, check out these tips and tricks for riding with an electric skateboard remote. With a little practice, you'll be shredding like a pro in no time!

1. Get comfortable with the feel of the board before you turn on the power. Place your feet on the deck and get a feel for the weight and balance of the board. Then, slowly apply pressure to the throttle to get used to how it feels before cranking up the speed.
2. Start slow and gradually increase your speed as you become more comfortable with riding. Don't try to go too fast too soon – it's much easier to control your

speed when you're going slow at first.

3. When making turns, use your body weight to lean into the turn. This will help keep you balanced and make turning much easier.

4. Practice using both hands on the remote – one hand on the throttle and one hand on the brake. This will help you get used to slowing down and stopping quickly if needed.

5. Always be aware of your surroundings and where you are in relation to other people or objects. This is especially important when riding at high speeds – you don't want to collide with anything!

With these tips in mind, go out and practice riding your electric skateboard! Soon enough, you'll be tearing up the streets like a pro!

Conclusion

We hope that this article has given you a better understanding of how to master the art of riding with an [electric skateboard remote](#). From selecting the right board and remote combination to knowing how to make those quick turns, it is important to stay safe while enjoying your ride. With practice and patience, you can become an expert on all things related to electric skateboarding!
